

Model 2120

Shaft Reaction Torque Sensor

DESCRIPTION

Model 2120 shaft reaction torque sensor is designed for installation between test pieces such as motors, switches, axles, or shafts and their mounting plate. These models operate and are calibrated in both directions. Nickel-plated alloy steel enhances durability in harsh, industrial environments. These models have no moving parts and utilize four bonded strain gages on a spe-

cial machined portion of the transducer to achieve a maximum non-linearity of 0.1% over a wide dynamic range. Typical applications include tire braking, motor dynamometers, friction-skid testing, and twist measurement. 50 in-oz to 1000 in-oz capacities.

FEATURES

- 50 in-oz to 1000 in-oz capacities
- 0.1 % non-linearity and hysteresis
- No maintenance of slip rings, bearings, or brushes
- Low-end sensitivity
- Reaction measurement designed to eliminate speed limitations
